# PISOS HOMOGENEOS en BALDOSAS

La construcción con patrón transversal real proporciona uniformidad de desgaste y estética consistente, además de mayor resistencia a la abrasión y al efecto gubia.

Soportan tránsito pesado de transeúntes y cargas rodantes.

Facilidad de soldar en caliente y de pegar con adhesivo para molduras cóncavas en espacios en lo que se requiere mayor control de infecciones.

La tecnología de recubrimiento resiste la suciedad, las manchas, los rayones, los roces y las abrasiones, además de la acción de sustancia químicas y el daño provocado por desinfectantes para manos con base de alcohol.

Facilidad de mantenimiento: sin lustre. La tecnología de recubrimiento minimiza el tiempo y las interrupciones necesarias para la limpieza.

Amplia paleta de colores y patrones coordinados.
